

Cleaning

M-Touch screen cleaning method:

Preparation

Gloves: No special requirements

Cleaner: Sprayway detergent, Model: 50 (recommended), Isopropyl based screen cleaner

Glass cleaning cloth: Anti-dust, lint-free or microfiber cloth

Method

Step 1: Turn the screen off and unplug the power cable. Don't just put the screen into sleep mode.

Step 2: Please wear gloves

Step 3: Shake up and down the glass cleaner, and spray on the cloth, never directly on the glass surface as there is a risk of moisture getting into the touch frame at the bottom of the screen

Step 4: Use a glass cleaning cloth to wipe the screen gently in the same direction, and then wipe the screen with dry cloth to remove any marks

Important notes:

- Turn off the device before cleaning
- Do not use acidic corrosion solvent
- Do not use water
- When wipe the screen, please wipe gently along the same direction
